UNITED STATES DEPARTMENT OF AGRICULTURE,
BUREAU OF PLANT INDUSTRY.

ECONOMIC AND SYSTEMATIC BOTANY.

Washington, D. C., September 7, 1917.

Mr. I. M. Johnston,
West 8th St.,
Upland, California.

Dear Sir:

Your letter of August 25 and the package of plants have been received. Enclosed is a list of the identifications. Your specimen of Bromus Porteri is the first known collection from California. We have it from Arizona. So I suppose it was to be expected in southern California.

Mixed with your 1630 Elymus glaucus Buckl. was some fragmentary Agropyron tenerum.

Very truly yours,

Agnes Chase

Assistant Systematic Agrostologist.

Johnston
